

LIFE EUROKITE CRIME REPORT

ILLEGAL PERSECUTION OF TAGGED RED KITES AND OTHER RAPTOR SPECIES IN EUROPE

PART 14 - COUNTRY SPECIFIC RESULTS - POLAND

First interim report on the results of the LIFE EUROKITE (LIFE18 NAT/AT/000048) project 2020-2024 with additional results from 2013 onwards

“Cross-border protection of the red kite in Europe by reducing human-caused mortality”

This company project report was compiled by TB Raab GmbH within the LIFE EUROKITE project (LIFE18 NAT/AT/000048) and was checked by the owner of the loggers and the representatives of the (cooperation) partners responsible for finding the dead birds.

Structure of the Crime Report

Due to the size of the report, it is divided in the following parts. Please see the other report parts for further information.

Part 1 - Introduction, Methods, Overall Results, Discussion, Conclusion & Recommendation

Part 2 - Country specific results - Austria

Part 3 - Country specific results - Belgium

Part 4 - Country specific results - Croatia

Part 5 - Country specific results - Czech Republic

Part 6 - Country specific results - Denmark

Part 7 - Country specific results - France

Part 8 - Country specific results - Germany

Part 9 - Country specific results - Greece

Part 10 - Country specific results - Hungary

Part 11 - Country specific results - Italy

Part 12 - Country specific results - Luxembourg

Part 13 - Country specific results - Netherlands

Part 14 - Country specific results - Poland

Part 15 - Country specific results - Portugal

Part 16 - Country specific results - Serbia

Part 17 - Country specific results - Slovakia

Part 18 - Country specific results - Spain

Part 19 - Country specific results - Switzerland

Part 20 - Country specific results - Turkey

Part 21 - Country specific results - Other countries outside Europe

Table of content

- 1 Overall summary 1
- 2 Introduction 2
- 3 Polish results 11
 - 3.1 Tagged individuals that have been poisoned 11
 - 3.2 Summary of the Polish results 16
- 4 References..... 18
- 5 List of tagged individuals which died in Poland 19

1 Overall summary

The LIFE EUROKITE project (LIFE18 NAT/AT/000048) is a cross-border protection project for the red kite and other raptor species in Europe. Within the LIFE EUROKITE project the core idea is to use telemetry technology to identify the spatial habitat use of the target raptor species, quantify the key reasons of mortality of bird of prey species in the EU and reduce human-caused mortality, particularly illegal activities such as poisoning.

Between 2013 and 2024, 3,554 individuals of 7 raptor species (3,161 red kites, 97 black kites, 43 booted eagles, 52 honey buzzards, 79 imperial eagles, 22 ospreys and 100 white-tailed eagles) were tagged with solar-powered GPS satellite tags in 19 countries across Europe with the help of many project partners and cooperation partners. From this a total of 1,795 individuals (1,680 red kites, 37 black kites, 18 honey buzzards, 29 imperial eagles and 31 white-tailed eagles) were tagged within the LIFE EUROKITE project.

From the 3,554 tagged birds a total of 1,623 died so far. Of these, a total of 1,594 individuals (1,480 red kites, 13 black kites, 14 booted eagles, 17 honey buzzards, 32 imperial eagles, 8 ospreys, 30 white-tailed eagles) died in the respective country where we also detected bird persecution within our sample. The first results of the LIFE EUROKITE project show, that 320 (20.08 %) of the tagged birds (293; 19.80 % red kites, 3; 23.08 % black kites, 1; 7.14 % booted eagles, 2; 11.76 % honey buzzards, 12; 37.50 % imperial eagles, 1; 12.50 % ospreys, 8; 26.67 % white-tailed eagles) were victims of illegal activities in 24 countries (10/01/2025). Poisoning (n= 238; 74.38 % of illegal activities) was by far the most common illegal act that caused the death of these tagged birds. The most used poison was Carbofuran which is banned in the EU since 2008. The second most common illegal act that caused the death of these tagged birds was shooting (66 individuals; 20.63 % of illegal activities). Of the 320 birds that were tagged and illegally killed, only 8 cases resulted in a conviction for bird persecution.

When extrapolating the data on illegal bird persecution over the past five years (2020–2024), it is estimated that approximately 46.180 red kites have died as a result of persecution. This estimate is derived by scaling up known persecution rates of tagged birds to the entire European red kite population, based on published population size estimates, average annual mortality rates, and the proportion of mortality attributed to illegal killing. It therefore reflects a population-level extrapolation, not a direct count of detected cases.

Due to varying numbers of tagged individuals and differing red kite population densities across countries, the results may vary considerably. Consequently, these findings do not allow for conclusions regarding the statistical frequency of illegal activities relative to red kite density in any given country.

Bird persecution in Europe persists all over Europe. Effective conservation requires stronger law enforcement, public education, international cooperation, and better tools like GPS tracking to detect and prosecute offenders. Political commitment across countries is crucial, along with harmonized laws, stricter penalties, and national action plans with clear goals. Raising awareness through initiatives like the “European Day Against Criminal Poisoning of Wildlife” and systematic data collection can help inform both the public and policymakers. Finally, stronger cross-border collaboration and support for monitoring and reporting systems are essential to address bird persecution at a European level.

2 Introduction

The LIFE EUROKITE project (LIFE18 NAT/AT/000048) is a cross-border protection project for the red kite and other raptor species in Europe. Within the LIFE EUROKITE project the core idea is to use telemetry technology to identify the spatial habitat use of the target raptor species, quantify the key reasons of mortality of bird of prey species in the EU and reduce human-caused mortality, particularly from illegal activities such as poisoning.

Specifically, the red kite (*Milvus milvus*) can act as an indicator of anthropogenic mortality across broad extents (Donázar et al. 2016; Natsukawa and Sergio, 2022) due to its high individual variability in migration strategies (García-Macía et al. 2022) and its condition of good sentinel species for main threats to raptors (Mattson et al. 2022). As migratory behaviour is associated with different exposure and risk levels, understanding the causes of cross-border mortality in red kites can provide important warning signs regarding wider impacts of human activities on wildlife populations in Europe (Donázar et al. 2016; Natsukawa and Sergio, 2022).

In response to ongoing illegal threats to migratory birds, international conservation bodies have taken major steps toward unified action. Under the leadership of the Convention on Migratory Species (CMS) and the Bern Convention, and with the involvement of numerous states, observers, and expert groups, a comprehensive framework was adopted: the *Rome Strategic Plan 2020–2030*. This plan outlines a joint commitment to halving illegal bird killings in Europe and the Mediterranean by 2030, using 2020 as a baseline (Council of Europe, 2019). By generating large-scale, cross-border evidence on mortality causes, the LIFE EUROKITE Crime Report plays a key role in tracking progress toward this ambitious objective.

The Article 12 of the Habitats Directive clearly defines that member states shall take requisite measures to establish a system of strict protection for the animal species listed in Annex IV(a) in their natural range, prohibiting, among others, all forms of deliberate capture or killing and shall establish a system to monitor the incidental capture and killing of specimens of these species in the wild (European Commission, 2021; Panter et al. under review).

Between 2013 and 2024, 3,554 individuals of 7 raptor species (3,161 red kites, 97 black kites, 43 booted eagles, 52 honey buzzards, 79 imperial eagles, 22 ospreys and 100 white-tailed eagles) were tagged with solar-powered GPS satellite tags in 19 countries across Europe with the help of many project partners and cooperation partners. From this a total of 1,795 individuals (1,680 red kites, 37 black kites, 18 honey buzzards, 29 imperial eagles and 31 white-tailed eagles) were tagged within the LIFE EUROKITE project (Figure 1 to Figure 7).

The first results of the LIFE EUROKITE project show that illegal persecution of tagged birds (shooting, poisoning, trapping) is one of the biggest threats for those species. To date (as of 10 January 2025), 320 tagged birds have been victims of bird crime (Figure 8).

This report will give an overview of tagged birds which died due to illegal activities in Poland and will give a detailed inside of the status of investigations and legal procedure.

Figure 3: Tagging of 43 booted eagles by the LIFE EUROKITE project and numerous cooperation and project partners across Europe in the years 2020- 2024.

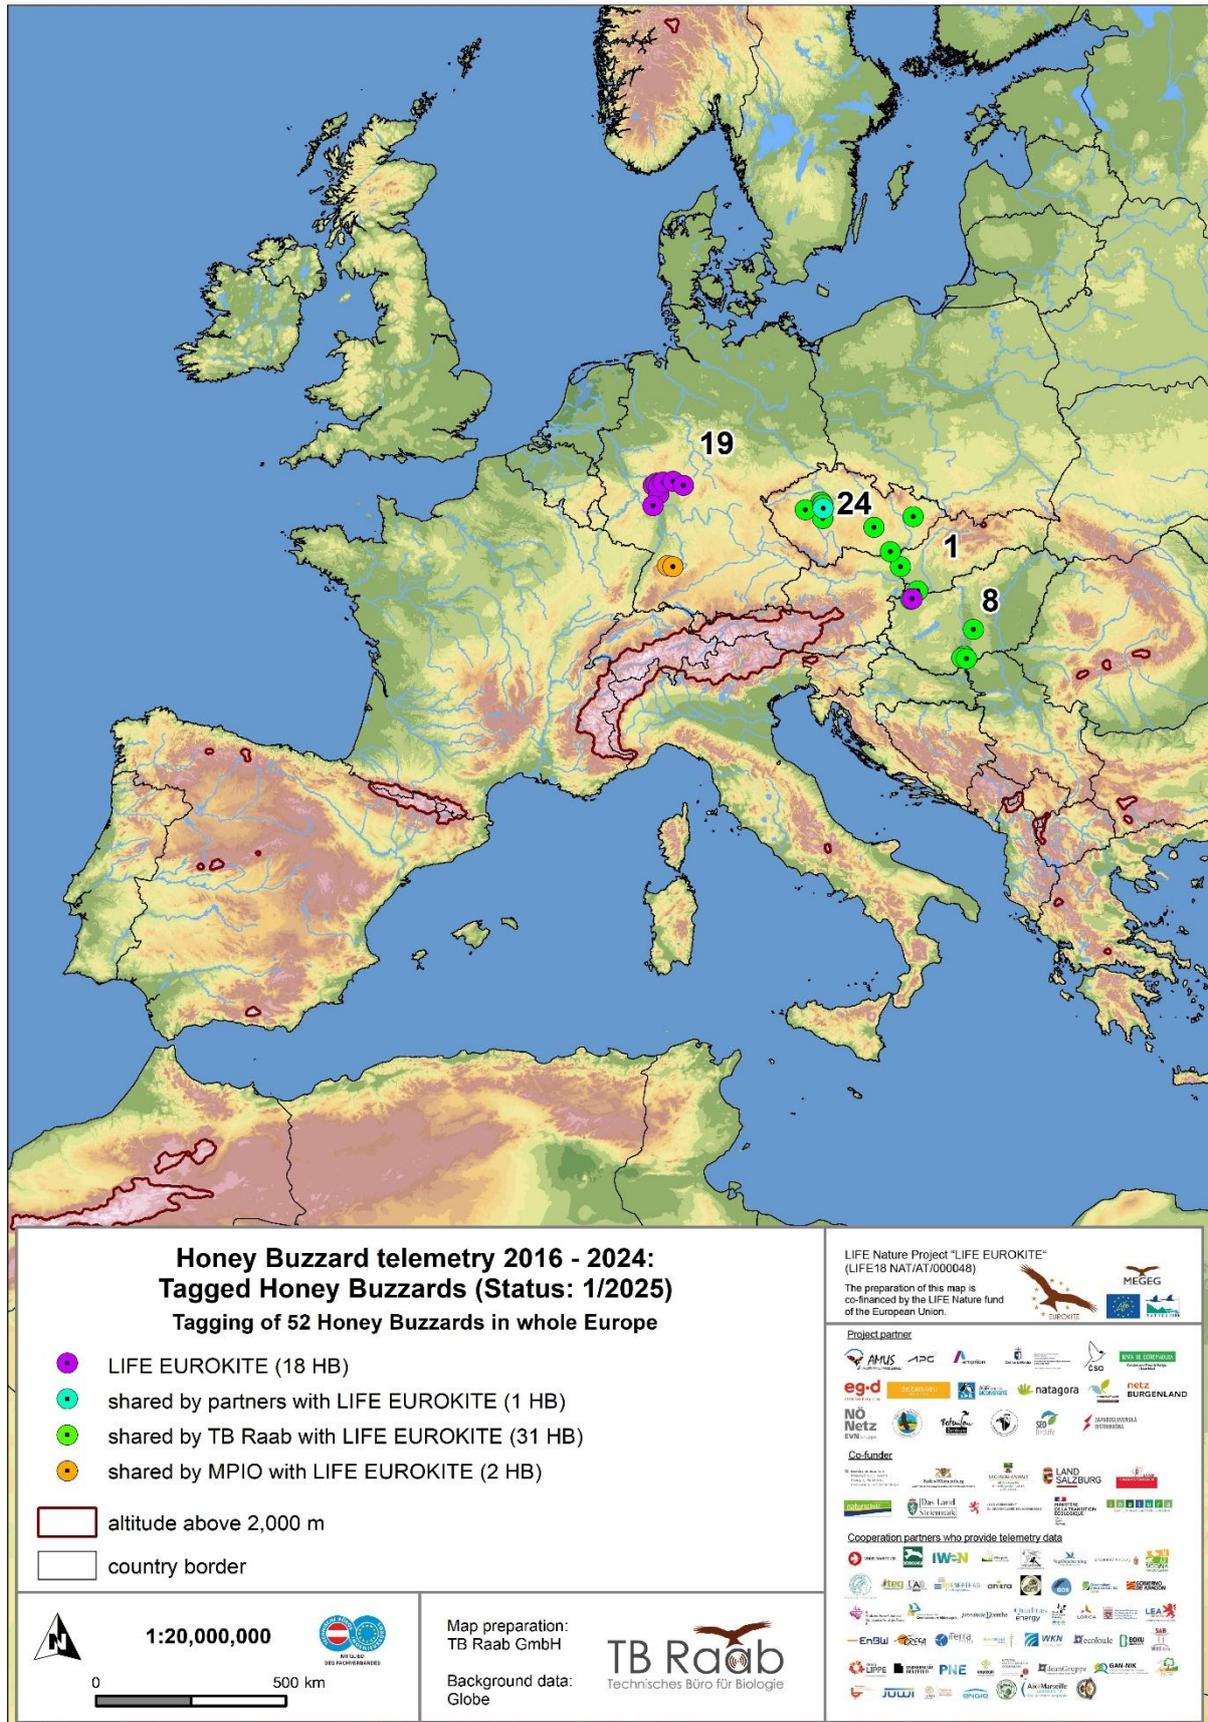

Figure 4: Tagging of 52 honey buzzards by the LIFE EUROKITE project and numerous cooperation and project partners across Europe in the years 2016-2024.

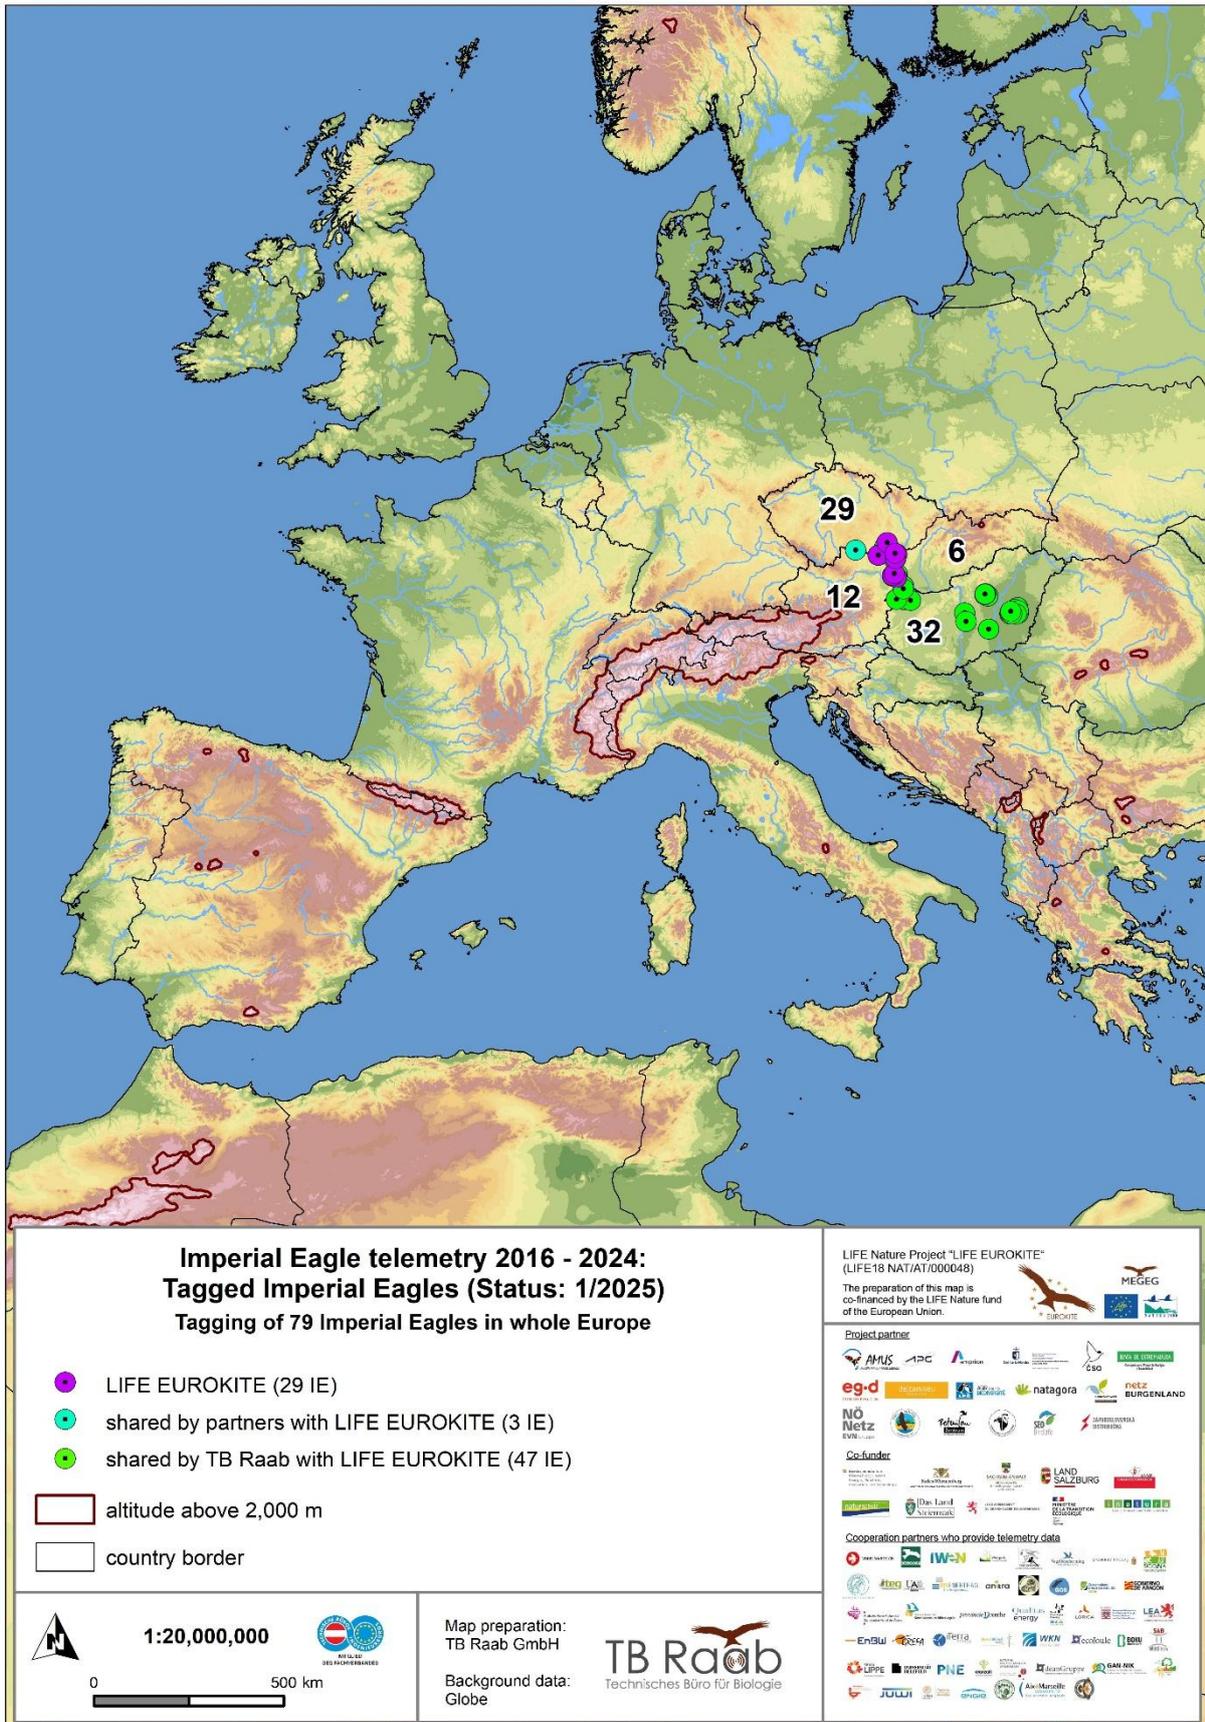

Figure 5: Tagging of 79 imperial eagles by the LIFE EUROKITE project and numerous cooperation and project partners across Europe the years 2016-2024.

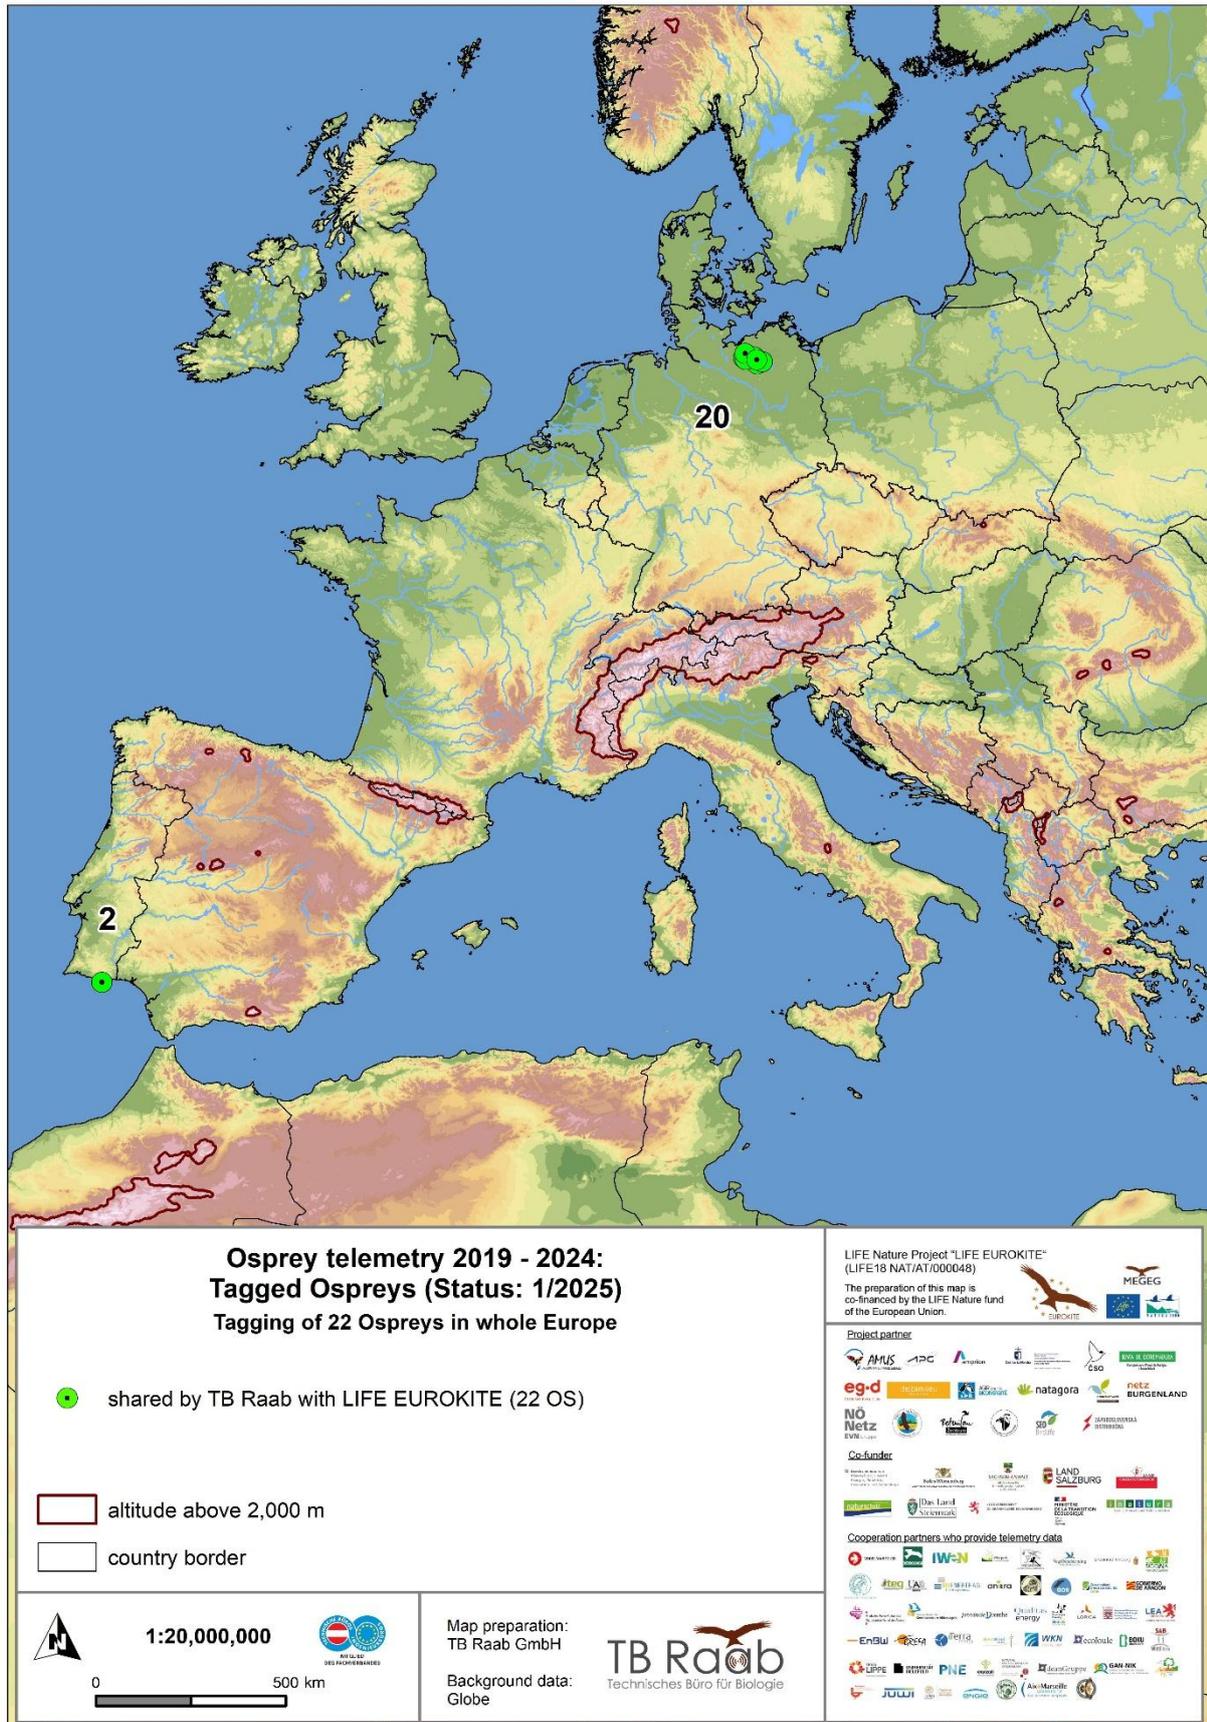

Figure 6: Tagging of 22 Ospreys by the LIFE EUROKITE project and numerous cooperation and project partners across Europe the years 2019-2024.

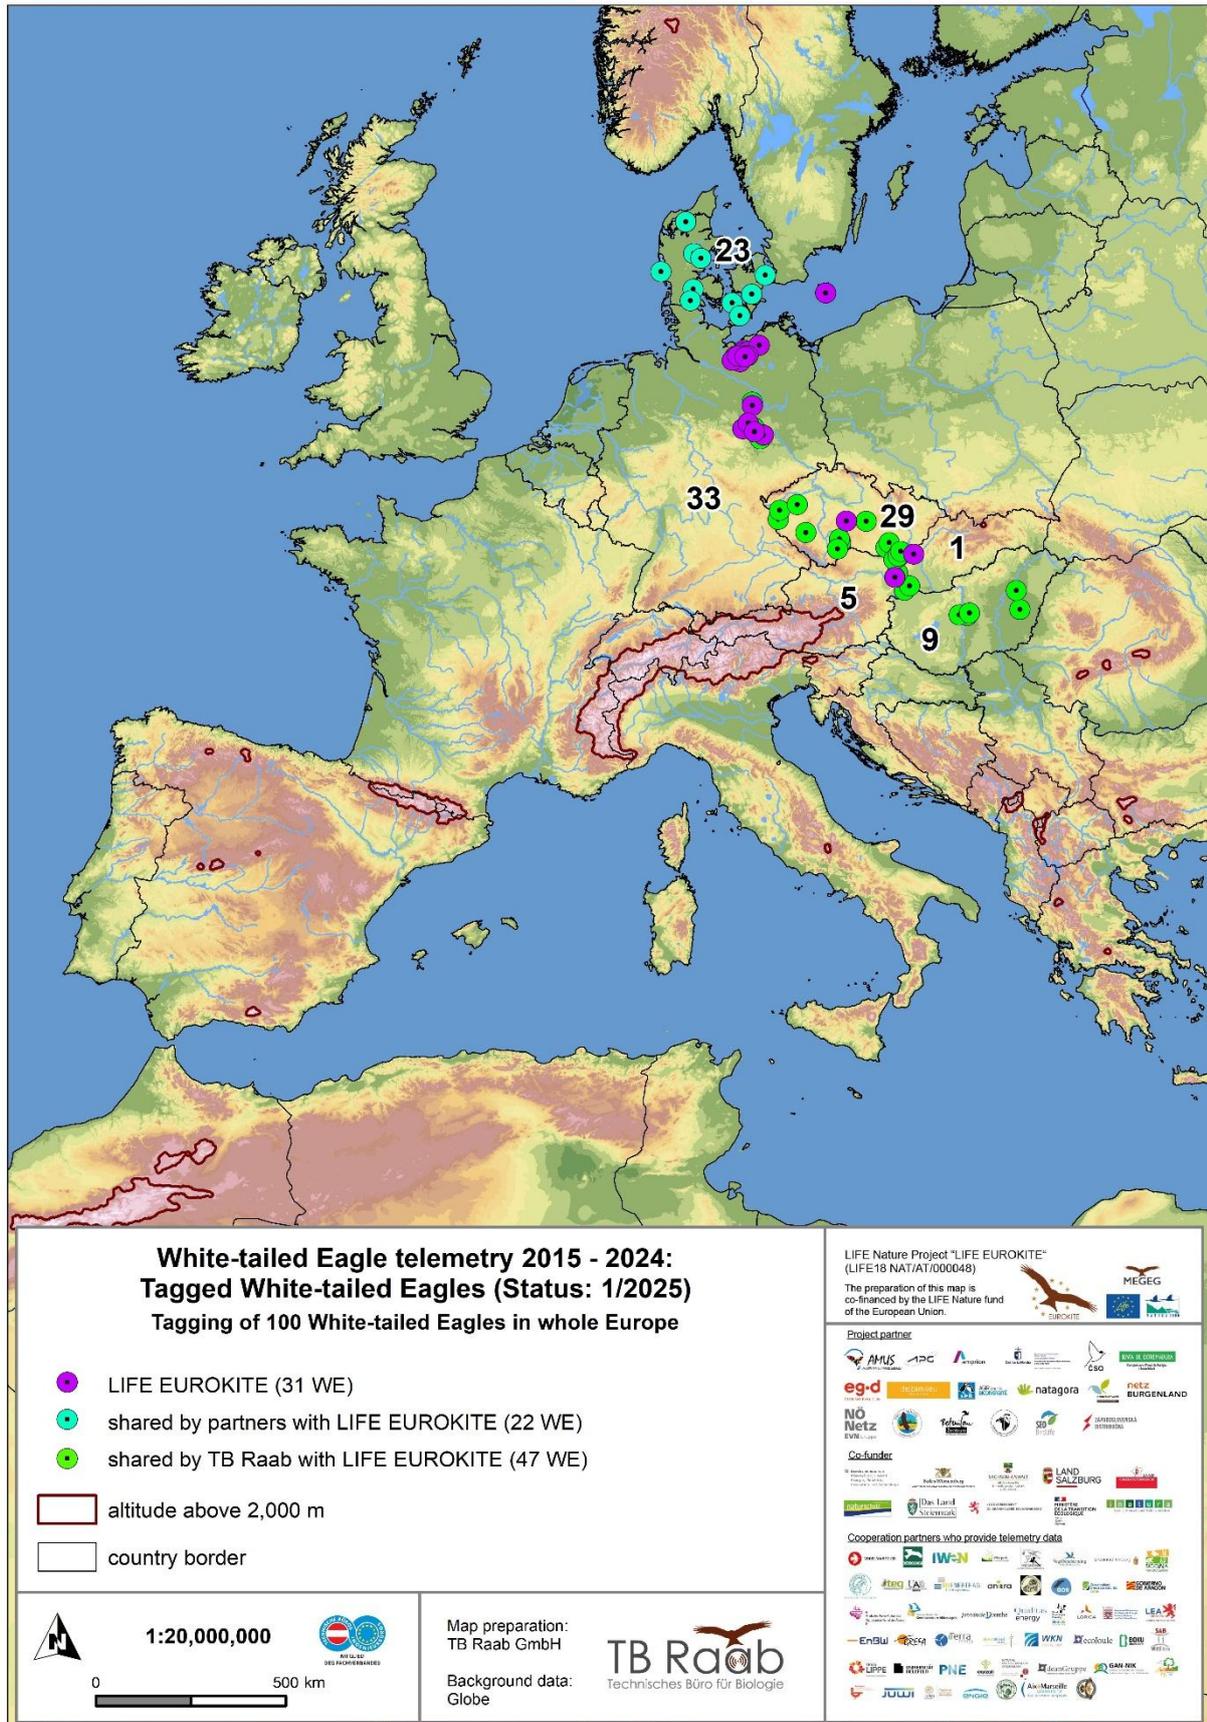

Figure 7: Tagging of 100 white-tailed eagles by the LIFE EUROKITE project and numerous cooperation and project partners across Europe the years 2015-2024.

3 Polish results

The subsequent section provides a detailed overview of the cases with illegal mortality reasons in Poland. 1 tagged bird has been confirmed as a victim of illegal activity. This bird died because of poisoning.

3.1 Tagged individuals that have been poisoned

The birds are listed in chronological order by date of bird crime, commencing with the first recorded case.

RK_1438

General information about the bird

Name: Binaced_35

Species: Red kite

Birth date: 22.04.2020

Place of tagging: Binaced, Huesca, Spain

Date of tagging: 11.12.2021

Age at tagging: 2. CY

Origin of bird: Captured with trap

Ownership category: A1

Logger number: ANITRA 257 - 21566

Ring number: 7008167

Sex: Female

Bird crime information

Place of bird crime: Gmina Mikstat, Wielkopolskie, Poland

Coordinates: 51,521636, 18,041726

Date of bird crime: 22.07.2022, 08:00:40 AM (UTC)

Age at bird crime (Days): 821

Age at bird crime: 3. CY

Responsible organization for the investigation: Private Person

Logger and/or bird found: Logger and Bird found

Carcass state: Good

Bird crime: Poisoning

Certainty category: Certain

Additional information: Expert assessment (TB Raab). Finding situation shows poisoning.

Investigation information

Last editing: 08.01.2025

Investigation: No

Police and/or authority investigation: Police and authority not informed

Legal proceeding: No

Conviction: No

If investigation stopped or no conviction was achieved, why?

Police and authority not informed

Figure 9: Left: Close-up of the head of red kite RK_1438. Right: Discovery situation of the red kite RK_1438, which died on 22.07.2022, in Gmina Mikstat, Wielkopolskie, Poland. © LIFE UEROKITE Archive

Figure 11: Detailed telemetry data of RK_1438 in the last days before death.

Figure 12: Telemetry data of RK_1438 within a 200m radius around the mortality point.

3.2 Summary of the Polish results

Please note, that due to different number of tagged birds per countries and especially the different density of red kites per country the results can differ significant per country. Therefore, these results do not provide any information about the statistical frequencies of illegal activities in the respective country.

The interim results of the LIFE EUROKITE (LIFE18 NAT/AT/000048) project 2020-2024 with additional results from 2013 onwards show, that 1 tagged raptor died in Poland due to illegal activities as it was poisoned (Table 1 to Table 2 & Figure 13).

Table 1: Overview of the numbers of tagged birds which died due to bird crime in Poland.

Mortality reason	Red kite	Total
Bird crime - Poisoning	1	1
Total	1	1

Table 2: Overview of the districts where tagged birds died due to bird crime in Poland.

Federal State	Bird crime - Poisoning	Total
Greater Poland Voivodeship (Wielkopolskie)	1	1
Total	1	1

Detected substance

The detected substance was categorised as unknown as no toxicological analysis was available. Therefore, it is not known if the poisoning was intentional or of undetermined intent.

Results of the investigation

There was no investigation or prosecution, as neither the police nor the authorities were informed.
