Citation

LIFE EUROKITE (2022): Results of the “2nd LIFE EUROKITE Winter Count of 267 selected regularly counted Red Kite roosting sites in whole Europe”; 07.01.-09.01.2022 (extended to 04.01. -23.01.2022). Impact monitoring of the LIFE EUROKITE Project. Unpublished report of the LIFE EUROKITE project “Cross-border protection of the Red Kite in Europe by reducing human-caused mortality” (LIFE18 NAT/AT/000048).

1. Note of thanks

The 2nd LIFE EUROKITE Winter Count of 267 selected regularly counted Red Kite roosting sites in whole Europe was organised by the LIFE EUROKITE project “Cross-border protection of the Red Kite in Europe by reducing human-caused mortality” with the help of the partners. The 2nd count has been coordinated the team of the Technical Office for Biology Mag. Dr. Rainer Raab (TB Raab) for the Central European Society for Raptor Protection (MEGEG) and organized by the National Coordinator of the 18 countries in Europe.

First, we want to thank everyone of the 480 volunteers who participated in the 2nd LIFE EUROKITE Winter Count of 267 selected regularly counted Red Kite roosting sites in whole Europe. Special thanks are going to the national coordinators, who helped us to organise all the volunteers in the different countries and the people who supported us with their data of the Red Kites. We want to thank Dušan Rak (ANITRA) who made it possible to give all the volunteers access to the data of more than 600 Red Kites (which transmitted the night roost positions within the counting period) on the ANITRA platform during this count.

2. The LIFE EUROKITE Project

LIFE EUROKITE (LIFE18 NAT/AT/000048) is a cross-border protection project for the Red Kite in Europe by reducing human-caused mortality. The Red Kite breeds nearly exclusively in Europe and is endangered due to illegal persecution. Within LIFE EUROKITE, we aim to get to the bottom of the anthropogenic mortality reasons using telemetry and work to prevent them. Based on the results measures to counteract anthropogenic mortality will be implemented. Where suitable structures and/or organisations exist, the counteractions will as far as possible, collaborate with them. The range of measures goes from information campaigns, initializing legal prosecution and lawsuits (e. g. against poisoners) to voluntarily technical measures (e. g. from power line providers) and political / legal efforts (e. g. adaption of CAP schemes) and awareness actions.

Main project objectives:

- Significant reduction of impact of poisoning (reduction of the rate of poisoning cases by 5% on EU level)
- Identification and solving of problematic cases concerning electrocution / collision
- Reduction of other anthropogenic reasons of mortality
- Population reinforcement in Spain halts range loss and identifies the factors causing a decline of the populations, presumably associated with climate change.

More information on www.life-eurokite.eu

3. The 2nd LIFE EUROKITE Winter Count

Since 2007, hibernating Red Kites have been recorded at their roosts on a weekend in January in some European countries. The counts are coordinated by the Ligue pour la Protection des Oiseaux (LPO) in France. For the second time, a synchronous counting of selected and regularly counted roosting sites of the Red Kite was carried out as part of the LIFE EUROKITE project by the Central European Society for Raptor Protection (MEGEG) together with numerous European partners and 480 volunteers. The Team of the Technical Office for Biology Mag. Dr. Rainer Raab (TB Raab GmbH) and the national coordinators are responsible for organizing the counts of 267 roosting sites (Figure 1 & 2) in 18 European countries, which will be consistently counted in the next years in January.

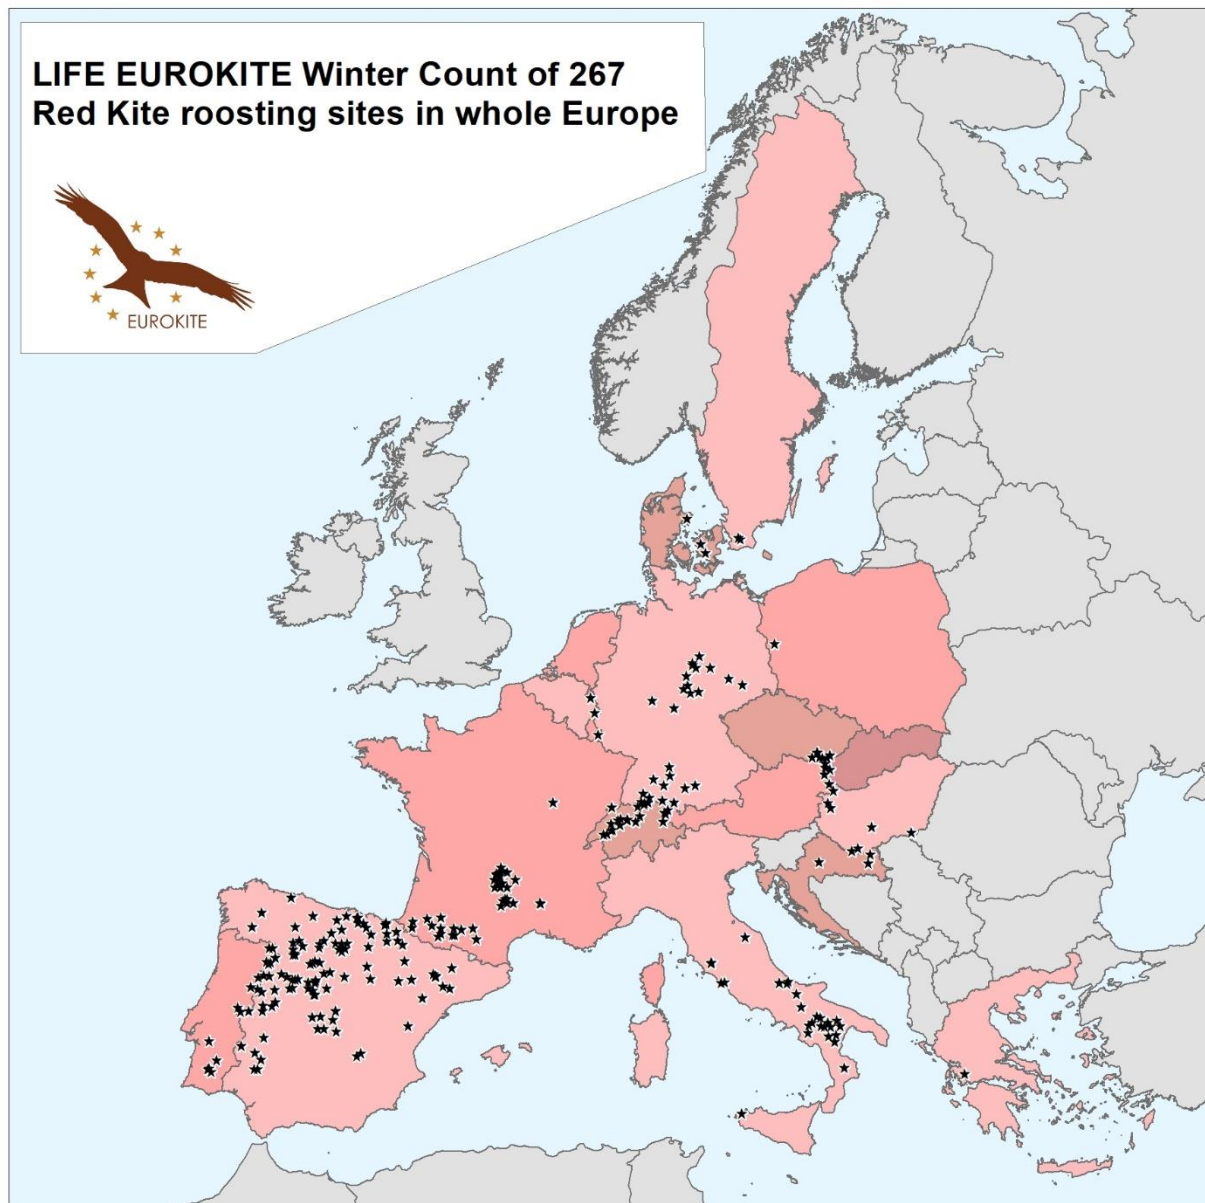

Figure 1: 267 (in the next years) regularly controlled roosting sites of the Red Kite within the 2nd LIFE EUROKITE Winter Count 2022.

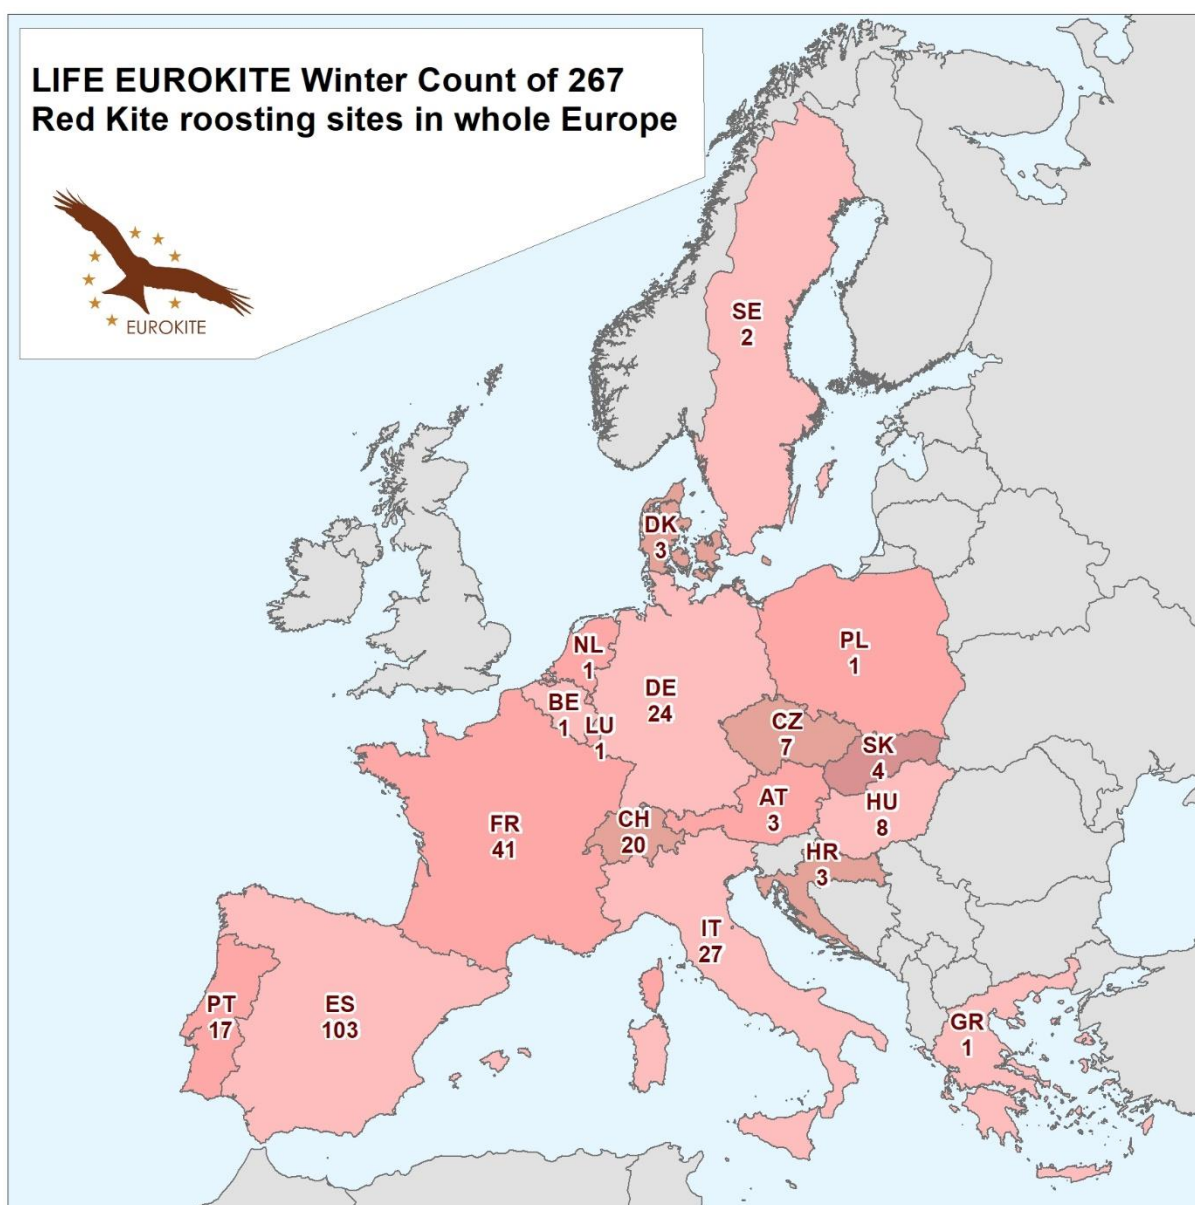

Figure 2: Number of the 267 (in the next years) regularly controlled roosting sites of the Red Kite per country within the 2nd LIFE EUROKITE Winter Count.

The winter census of the Red Kite roosting sites took place across Europe from January 7th to January 9th 2022 and was therefore on the same weekend as most national censuses, which are already established in many countries. As in previous years, several hundred volunteers took part in these counts. Due to COVID and its' restrictions it was not able to count in all countries as planned.

The traditional and most important wintering areas of the Red Kites are in Spain and the south of France. However, more and more Red Kites overwinter, probably also due to climate change, near their central European breeding area. In January 2021 more than 57,000 Red Kites were counted at their roosting sites and summarized by LPO in a list. Of these, approx. 32,000 – 42,000 were counted in Spain, approx. 14,000 in France and approx. 3,100 in Switzerland.

The telemetry data of more than 600 tagged Red Kites offered by the LIFE EUROKITE project as well as by numerous (cooperation) partners (SOI/Vogelwarte Sempach, Patrick Scherler; TB Raab, Rainer

Raab; MEGEG, Rainer Raab; Delta Milieu, Stef van Rijn; University of Marburg, Prof. Dr. Nina Farwig, Sascha Rösner, Dr. Dana Schabo, Theresa Spatz; Max-Planck-Institut, Wolfgang Fiedler; Ökotop, Ubbo Mammen; SEO/BirdLife; LPO, Fabienne David; Red Kite Project Thuringia, Thomas Pfeiffer; Rotmilanzentrum, Martin Kolbe; ANITRA, Dušan Rak; CEN Corse; TEG-UAM, Juan Traba, Javier de la Puente & VFÚ, Ivan Literak) were updated daily for all registered participants on the ANITRA system and were available for the period from the 23rd of November 2021 to January 23rd, 2022. ANITRA (<https://anitracking.com/>) is a technology company started in 2017 in the Czech Republic. ANITRA develops hardware and software solutions primarily for wildlife research and conservation. The core of the brand is formed by the ANITRA platform which serves as a dashboard for GPS-GSM data and telemetry projects in general. It provides a large scale of analytic, visualization, and data sharing functionality essential for efficient project and field work.

4. Results

In total 245 of the 267 roosting sites were counted with a minimum of **22,065** and a maximum of **22,886 Red Kites** and 17 Black Kites (Table 1 & 2, Figures 3 & 4 & Annex I).

Table 1: Results of the LIFE EUROKITE winter count of 267 Red Kite roosting sites (counted only 245 roosting sites) in Europe (18 countries) in January 2021 per country (per countries in cross-border regions).

Country	Number of controlled roosting sites	Roosting sites occupied	Roosting sites not occupied	Number of Red Kites (min.)	Number of Red Kites (max.)	Number of Black Kites
Austria	3	3	0	243	243	0
Belgium	1	0	1	0	0	0
Croatia	3	2	1	18	18	0
Czechia (included CZ_AT_SK_001)	7	7	0	351	351	0
Denmark	3	3	0	343	343	0
France	39	34	5	4,012	4,095	4
Germany	24	19	5	1,352	1,555	0
Greece	1	1	0	12	12	0
Hungary	8	3	5	44	44	2
Italy	19	18	1	947	1,010	8
Luxembourg	1	0	1	0	0	0
Netherlands	1	0	1	0	0	0
Poland	1	0	1	0	0	0
Portugal	9	7	2	315	399	1
Slovakia (included SK_AT_001 & SK_AT_004)	4	4	0	239	239	0
Spain	101	89	12	12,957	13,345	2
Sweden	0	0	0	0	0	0
Switzerland	20	17	3	1,232	1,232	0
Total	245	207	38	22,065	22,886	17

At some of the roosting sites where the count took place, no Red Kites were present. This is due to different reasons. First of all, some of the roosting sites were known, that they are not occupied by Red Kites now but will probably be used as wintering roosting sites in the future. Therefore, the LIFE EUROKITE project started to count these places in order to follow possible trends in the change of roosting sites. Other reasons could be the natural shift of the roosting sites, weather conditions or disturbance.

Table 2: Number of roosting sites and Red Kites counted per day within the LIFE EUROKITE winter count in January 2022 (blue coloured: official counting weekend).

Date	Number of roosting sites controlled	Number of Red Kites (min.)	Number of Red Kites (max.)
04/01/2022	2	321	321
05/01/2022	1	5	15
06/01/2022	3	225	225
07/01/2022	24	1,911	1,964
08/01/2022	133	11,372	11,709
09/01/2022	36	2,351	2,387
10/01/2022	8	761	761
11/01/2022	9	657	742
12/01/2022	11	2,972	2,972
13/01/2022	3	189	189
14/01/2022	2	219	219
15/01/2022	2	42	42
16/01/2022	4	443	743
17/01/2022	1	24	24
18/01/2022	1	70	70
19/01/2022	2	341	341
20/01/2022	1	84	84
22/01/2022	1	0	0
23/01/2022	1	78	78
Total	245	22,065	22,886

The most roosting sites (133) were counted on the 8th of January 2022. On this day, a maximum of 11,709 Red Kites was counted. On the actual counting weekend (07.01-09.01.2022) a total of 193 roosting sites with a maximum of 16,060 Red Kites were counted.

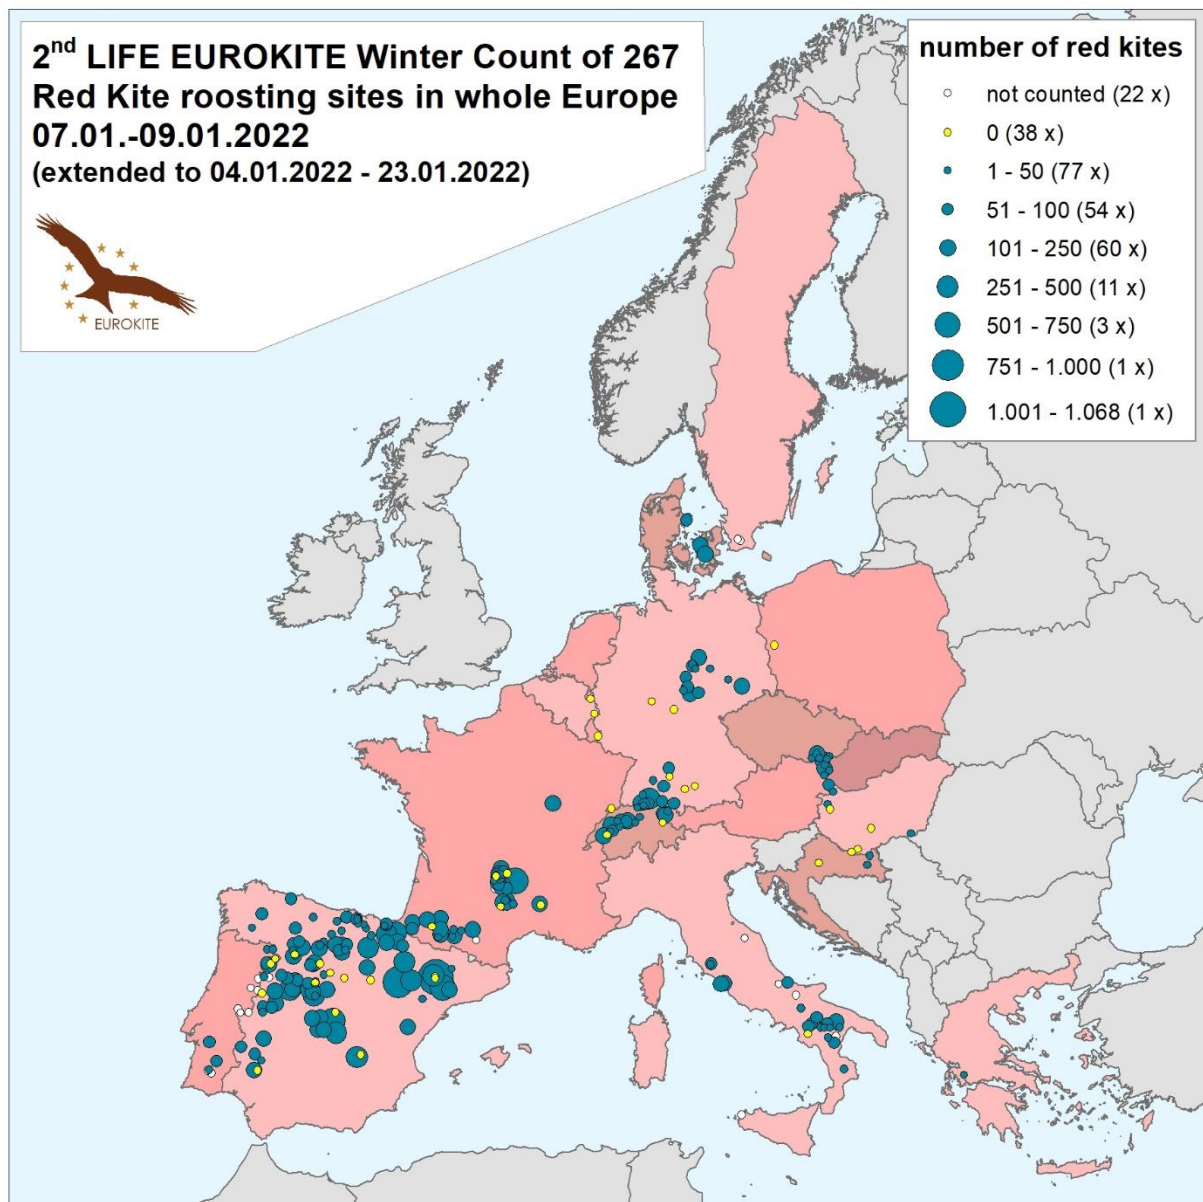

Figure 3: Number of Red Kites per roosting site counted during the 2nd LIFE EUROKITE winter count at the 267 selected roosting sites in January 2022.

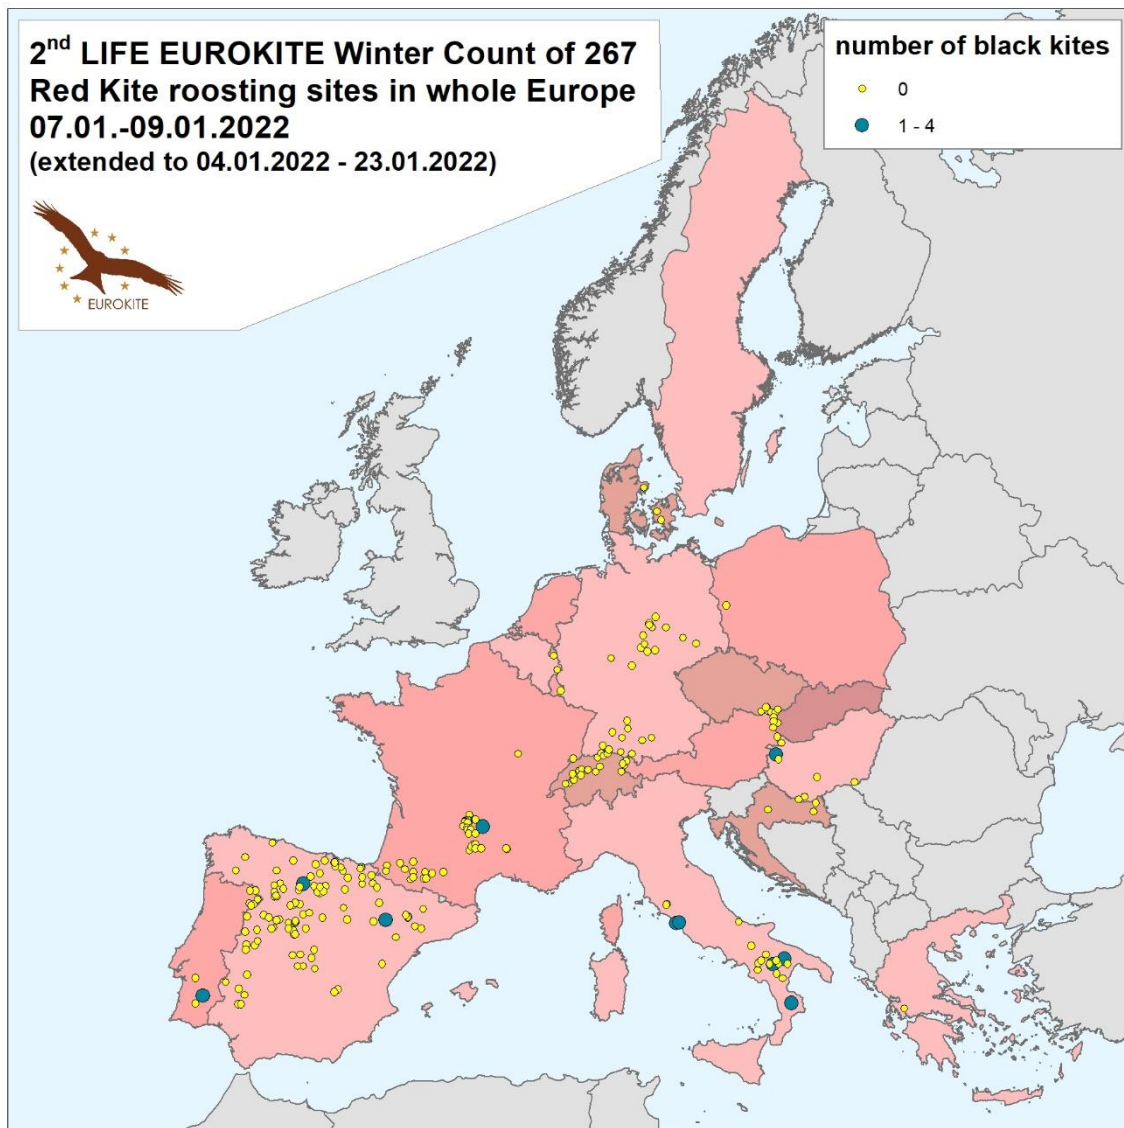

Figure 4: Number of Black Kites per roosting site counted during the 2nd LIFE EUROKITE winter count at the 267 selected roosting sites in January 2022.

5. Comparison of the results of the years 2021 & 2022

Within the LIFE EUROKITE Winter Count in total 267 selected roosting sites of the Red Kites will be counted within the next years to compare and analyze the changes of these roosting sites and the movements of the Red Kites.

In 2021 the first LIFE EUROKITE Winter Count took place with the result of 267 counted roosting sites of which 245 roosting sites were occupied with a total number of max. 23.128 Red Kites. In 2022 only 245 roosting sites were counted of which 206 roosting sites were occupied with a total number of max. 22,886 Red Kites.

To compare the results of both years only the roosting sites which were counted in both years (N=245) are taken into account. In 2021 in total 21,848 Red Kites were counted at these 245 roosting sites. In 2022 in total 22,886 Red kites could be counted at these 245 roosting sites. That means a plus of 1,038 Red Kites (Tab 3, Figures 5). The biggest changes between 2021 & 2022 were identified in France (+ 1,122), Spain (- 939) and Germany (+ 561) (Tab. 4).

Table 3: Comparison of the results of the years 2021 & 2022 at 245 roosting sites.

Year	Controlled roosting sites	Number of Red Kites max.	Number of Red Kites (max.) on the 245 roosting sites counted in 2021 & 2022
2021	267	23,128	21,848
2022	245	22,886	22,886
Difference			+ 1,038

Table 4: Number of Red kites and the changes between 2021 to 2022 at 245 roosting sites of the LIFE EUROKITE winter count per country.

Country	Number of roosting sites	Number of roosting sites counted in 2021 & 2022	Difference of counted Red Kites in 2021 & 2022
Austria	3	3	+ 137
Belgium	1	1	0
Croatia	3	3	- 8
Czechia	7	7	+ 66
Denmark	3	3	+ 59
France	41	39	+ 1,122
Germany	24	24	+ 561
Greece	1	1	+ 10
Hungary	8	8	- 30
Italy	27	19	- 128
Luxembourg	1	1	0
Netherlands	1	1	0
Poland	1	1	0
Portugal	17	9	+ 55
Slovakia	4	4	+46
Spain	103	101	- 939
Sweden	2	0	--
Switzerland	20	20	+ 87
Total	267	245	+ 1,038

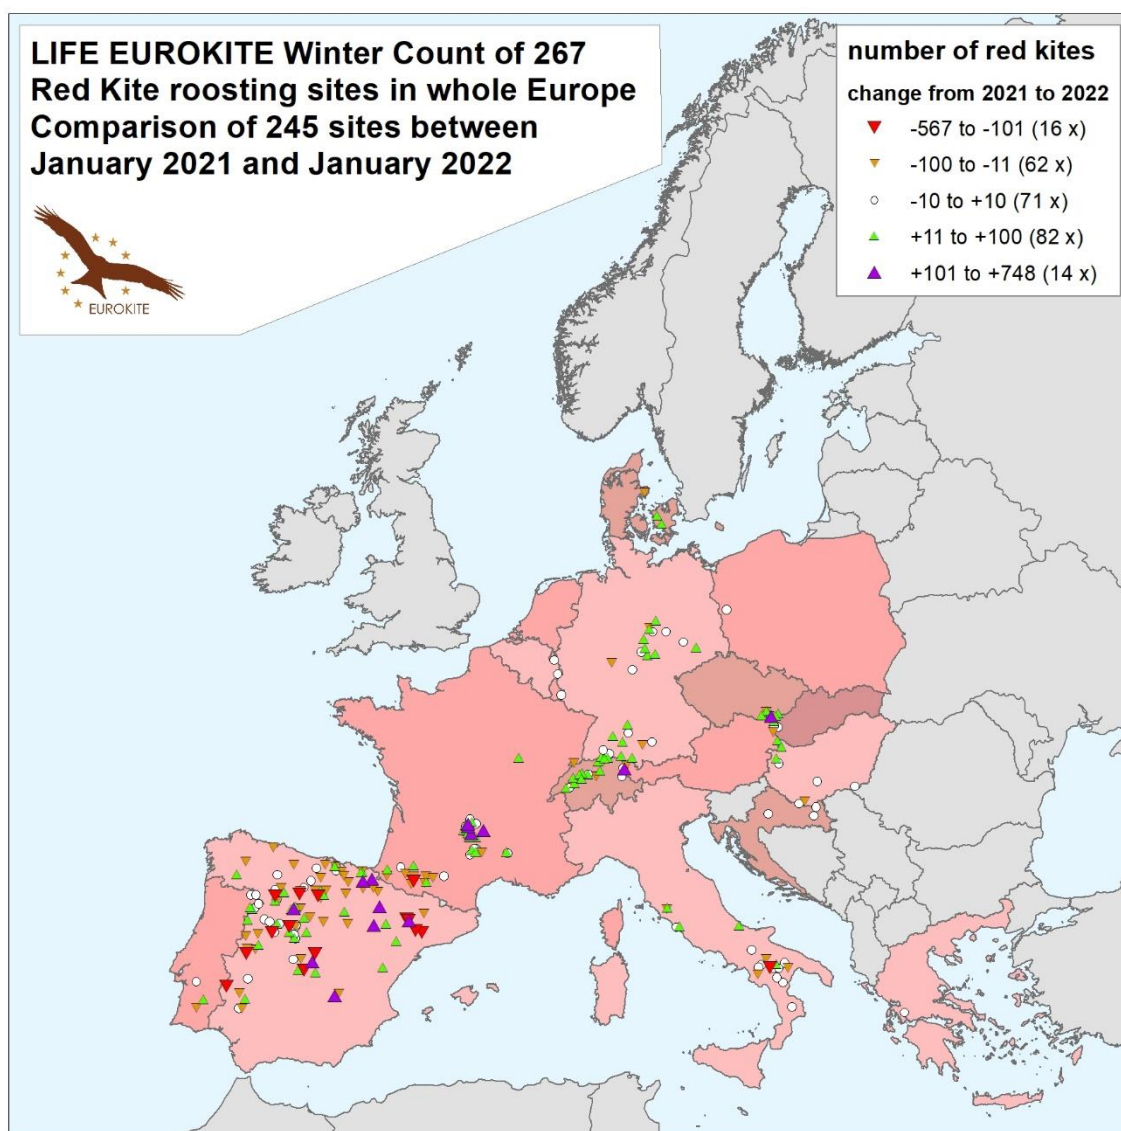

Figure 5: Number of Red kites and the changes between 2021 to 2022 at 245 roosting sites of the LIFE EUROKITE winter count.

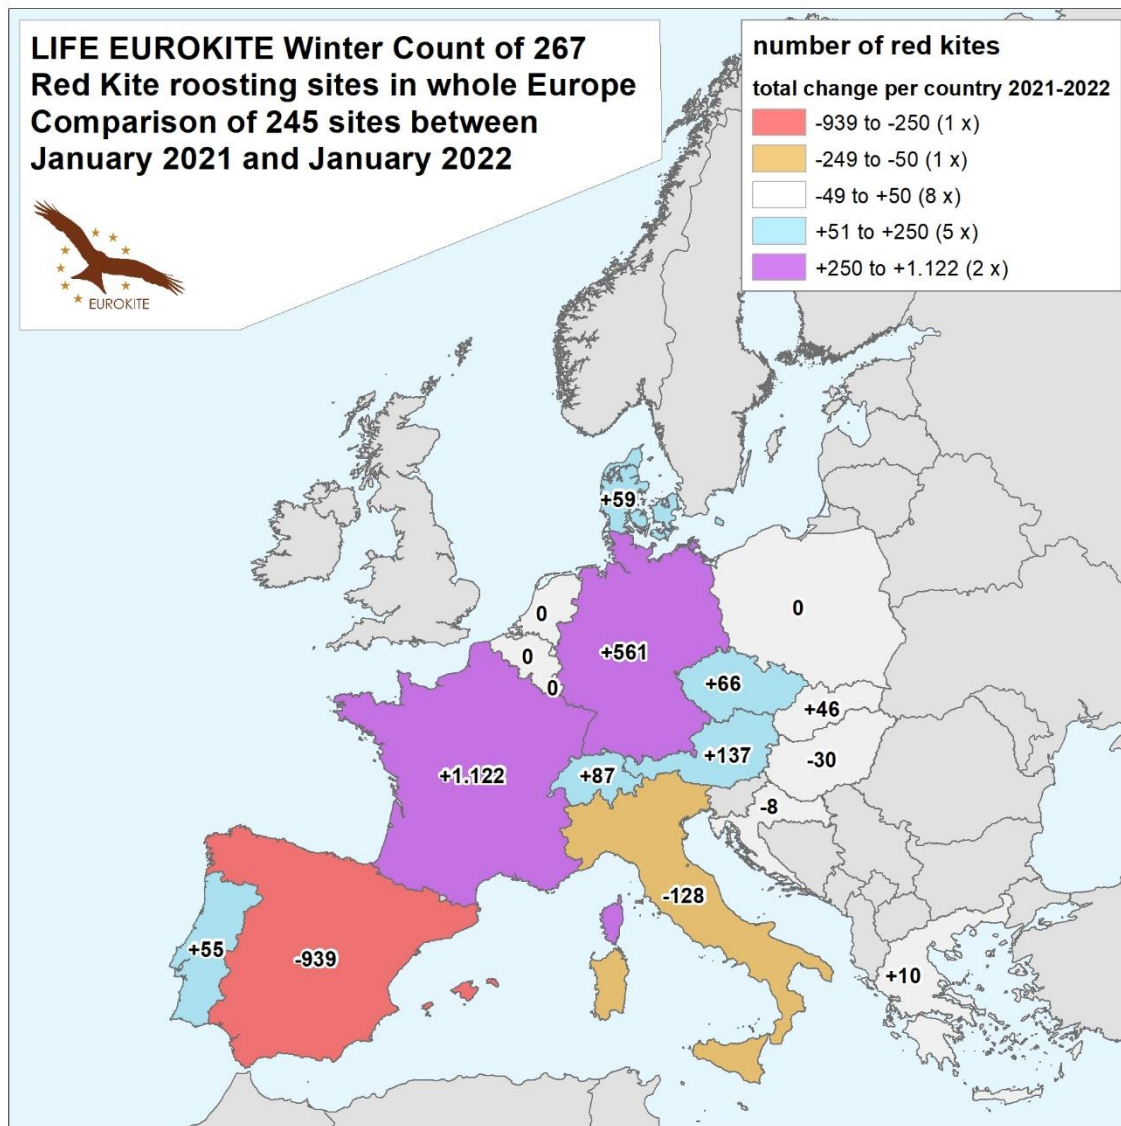

Figure 6: Number of Red kites and the changes between 2021 to 2022 at 245 roosting sites of the LIFE EUROKITE winter count per country.

Coordinating Beneficiary

The TB Raab was commissioned to implement the LIFE EUROKITE project after a pan-European public tender.

Project partner (Associated Beneficiary)

Co-financier

Cooperation partner

This project is co-financed by the LIFE Nature Programme of the European Union

Annex I

Table 5: Annex I - Results of the LIFE EUROKITE winter count of 267 Red Kite roosting sites in Europe (18 countries) in January 2022 per roosting site.

Number	Roosting site	District/Federal state	Date	Red Kite min.	Red Kite max.	Black Kite
